

2.5 Reflection Questions

1. In your own words, explain Django static files and how Django handles them.

Django static files are used for CSS, Scripts, and images that are used in a web application. They are stored in a different directory than dynamic user-generated content for example. Django automatically configures and optimizes these files.

2. Look up the following two Django packages on Django's official documentation and/or other trusted sources. Write a brief description of each.

ListView: a class-based view that simplifies displaying a list queried objects on a web page. It can handle common tasks like pagination and rendering templates.

DetailView: designed for displaying a detailed page of a single object from a query set. It automatically retrieves an object based on parameters it consumes, and renders it using a specified template.
