Exercise 2.2: Django Project Set Up

Reflection Questions

1. Suppose you're in an interview. The interviewer gives you their company's website as an example, asking you to convert the website and its different parts into Django terms. How would you proceed? For this question, you can think about your dream company and look at their website for reference.
   (*Hint: In the Exercise, you saw the example of the CareerFoundry website in the Project and Apps section.*)

   We would want to start by mapping each main section or function of the website. Next we could map each of the data structures to Django Models.

   The next step could be to map all the URL's/Templates to the views they would contain.

2. In your own words, describe the steps you would take to deploy a basic Django application locally on your system.

   1. Install and activate the virtual environment
   2. Start a new Django project
   3. Migrate
   4. Run Server

3. Do some research about the Django admin site and write down how you'd use it during your web application development.

   I would use the Django Admin site to change/add features to the website.
